

Fantastic Fanatics is an innovative sports fundraising platform that allows fans and members of sports clubs, at any level, through any sport, generate regular fresh revenues for their club, with no cost to the club or the club member, just by shopping with our in store and online retail partners.

One of our main USP's is that our members don't have to carry a separate membership card. We spot and process transactions made with everyday Visa and Mastercards so, it's business as usual at the till, making it an easier and slicker experience for our members and our retail partners.

In order to provide this product and service, to sports clubs and members, everyday debit and credit cards will have to be linked through our platform when sports fans sign up. We fully appreciate this can make some people a bit anxious but, our members security is our top priority, and this is why we have the following in place.....

-  Payment Card Industry Data Security Standard (PCI DSS) compliance, through our technical partner.
-  Brand new payment card security technology (called tokenisation), that never stores any card details, just gives them a completely random and unique ID, of numbers, letters and symbols, that Visa and Mastercard use to identify transactions. As soon as actual card details are entered, tokenisation happens, with the card details being instantly deleted.
-  Amazon Web Services for all our IT Infrastructure.
-  Full Cyber Insurance.
-  Ethical hacker, tasked to try and breach the security of the platform.
